SUMMARY

B.Tech Information Technology undergraduate and backend-focused full-stack developer skilled in Python, Flask, and SQLAlchemy, with hands-on experience designing REST APIs and CRUD-based web applications, and automating workflows with UiPath RPA. Shipped three full-stack projects deployed on Render/Netlify, including a sentiment-analysis tool processing 1,000+ data points and a system managing 200+ patient records. Building a data analytics foundation through NPTEL coursework and Forage simulations with Tata and Deloitte (Pandas, Tableau, Excel); Runner-Up, Data Dash analytics competition. Seeking a Python/Flask Developer, Backend Developer, or Data Analyst internship.

EXPERIENCE

HOGC — Developer Intern

2026

- Contributing to the development of a reusable CRUD Engine and backend packages using Python and Flask, streamlining repeated data-access logic across projects.
- Working on API development, modular architecture, and dependency injection to build scalable, maintainable software components.
- Collaborating with the engineering team on database integration and backend package design, following modular design practices.

PROJECTS

YouTube Comments Analyzer

Mar 2025

- Engineered a sentiment-analysis tool at SVCE Hackathon, processing 1,000+ timestamped YouTube comments per video via the Google Gemini API to generate actionable, segment-wise content recommendations for creators.
- Tools:** Python, Flask, Google Gemini API, REST API Integration, JSON, HTML/CSS
- GitHub:** github.com/vishnu2006034/YouTube-comments-analysis

Hospital Management System

Jan 2025

- Built a full-stack patient management system handling 200+ records with CRUD operations across admission, discharge, and workflow tracking; designed a normalized SQLAlchemy schema to support multi-department queries with minimal joins.
- Tools:** Python, Flask, SQLAlchemy, CRUD Operations, REST API Development, HTML/CSS
- GitHub:** github.com/vishnu2006034/healthcare

Employee Management System

Dec 2024

- Co-built a Flask-based workforce management system for a 2-person team, owning backend CRUD operations, database migrations, and shift-scheduling and attendance-tracking modules end-to-end.
- Tools:** Python, Flask, SQLAlchemy, CRUD Operations, HTML/CSS
- GitHub:** github.com/vishnu2006034/employee-management

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL Certification – Python for Data Science (IIT/IISc joint initiative) — comprehensive introduction to Python for data science applications.
- UiPath Academy Automation Explorer Training — certified foundation in RPA using UiPath.
- Tata Data Visualisation Job Simulation (Forage, Jun 2025) — built data visualizations and decision-support materials for TCS client leadership.
- Deloitte Australia Data Analytics Job Simulation (Forage, Jun 2025) — performed data analysis and forensic technology tasks; built a Tableau dashboard and used Excel for classification and business insights.
- Runner-Up, Data Dash Analytics Competition — data cleaning, EDA, and visualization using Python (Pandas, NumPy, Matplotlib) to derive actionable insights.

EDUCATION

Jeppiaar Engineering College, Chennai

Sept 2023 – Present

B.Tech in Information Technology • CGPA: 8.2 / 10.0

SKILLS

- Programming Languages:** Python, JavaScript, HTML, CSS, SQL
- Frameworks & Backend Development:** Flask, SQLAlchemy (ORM), REST API Development, CRUD Operations, JSON, Relational Database Design
- Data Analytics:** Data Analysis, Pandas, NumPy, Matplotlib, Tableau, Excel
- Automation:** UiPath Studio, RPA, UiPath RPA Explorer (Certified)
- Tools & Platforms:** Git, GitHub, Netlify, Render, Deployment
- Currently Learning:** Data Structures & Algorithms (LeetCode), React
